1. Introduction

In today's data-driven world, sports analytics plays an important role in understanding player performance and match strategies. Cricket, especially T20 format, generates a large amount of data including match results, player statistics, and team performance. Analysing this data helps in identifying patterns such as winning strategies, player consistency, and overall team performance.

This project focuses on analysing data from the ICC Men's T20 World Cup 2026 using Microsoft Excel. The raw dataset is processed, cleaned, and transformed into meaningful insights using functions, pivot tables, and charts. An interactive dashboard is created to visualize key information such as batting and bowling performance, match outcomes, and toss impact.

The dashboard is designed to be simple, interactive, and easy to understand, allowing users to quickly explore the data and gain insights without going through raw tables.

2. Aim

To analyse T20 World Cup data and create an interactive dashboard using Microsoft Excel.

3. Objectives

- To organize and clean raw cricket data
 - To analyse batting and bowling performance
 - To identify match-winning patterns (defending vs chasing)
 - To study the impact of toss on match results
 - To design an interactive dashboard using charts and slicers
-

4. Scope of Study

The scope of this project involves analysing the ICC Men's T20 World Cup 2026 dataset using Microsoft Excel to gain insights into match outcomes, player performance, and team statistics. It includes studying key aspects such as top batsmen and bowlers, match-winning strategies (defending vs chasing), and the influence of toss decisions on match results.

The project also focuses on transforming raw data into meaningful information through data cleaning, use of formulas, pivot tables, and charts. An interactive dashboard is created to present the analysis in a clear and visually appealing manner, enabling users to easily explore different insights.

Additionally, the project demonstrates how Excel can be effectively used for data analysis and visualization in real-world scenarios. However, it is limited to descriptive analysis and does not include advanced techniques such as predictive modelling or machine learning.

5. About Dataset

The dataset used in this project is based on the ICC Men's T20 World Cup 2026, co-hosted by India and Sri Lanka from February 7 to March 8, 2026. It includes detailed information about matches, player performances, and overall tournament statistics, which is used for analysis and dashboard creation.

Key Details:

- 20 teams, 55 matches, 8 venues
- Data includes matches, batting stats, bowling stats, and points table
- India won the tournament, defeating New Zealand in the final

The dataset has been compiled from reliable sources such as ESPNcricinfo, ICC official website, and Wikipedia, and is used for analytical and visualization purposes.

6. Methodology

6.1 Data Collection

The dataset used in this project was collected from multiple reliable sources. The primary dataset was obtained from Kaggle, which provided structured files containing match details, player statistics, and tournament information. Additional data validation and references were taken from ESPNcricinfo, the official ICC website, and other sources available through Google.

Using multiple sources helped in ensuring data accuracy, completeness, and consistency. The collected data includes match results, toss details, batting and bowling performance, and team-related information required for analysis.

6.2 Data Cleaning

- Removed missing or irrelevant values
 - Corrected text inconsistencies using functions like TRIM() and UPPER()
 - Fixed formatting issues (e.g., preventing values like “4/25” from converting into dates)
-

6.3 Data Transformation

- Created new columns such as:
 - Toss Impact (Yes/No)
 - Match Type (Defending/Chasing)
 - Organized data for better analysis
-

6.4 Pivot Table Creation

- Used pivot tables to summarize large datasets
- Identified top batsmen and bowlers

- Calculated match counts and distributions
-

6.5 Dashboard Design

The dashboard was designed to present key insights from the dataset in a clear, interactive, and visually appealing manner. The focus was on making the information easy to understand while maintaining a clean and structured layout. Different visual elements and Excel features were used to highlight important patterns and performance metrics.

Key Features:

- Display of key performance indicators such as top batsman, top bowler, and match statistics
- Use of donut charts to represent match outcomes and toss impact
- Bar charts for comparing player and team performance
- Interactive slicers to filter player data dynamically
- Use of shapes and formatting to create a clean and professional UI

The dashboard layout was carefully arranged with proper alignment, consistent colour theme, and minimal clutter to ensure better readability and user experience.

7. Dashboard

8. Observations

During the analysis, some clear patterns were observed from the dataset and dashboard. These helped in understanding match outcomes and player performance.

Key Observations:

- Many matches were won while **defending**
 - Toss did not always affect the match result
 - Some players showed consistent performance
 - Most matches had clear results with very few exceptions
-

9. Results

The analysis of the dataset and the creation of the dashboard resulted in meaningful insights about the tournament. The dashboard successfully presents important information in a clear and interactive format.

Key Results:

- Identified top batsmen and bowlers of the tournament
 - Analysed match outcomes such as defending and chasing wins
 - Evaluated the impact of toss on match results
 - Created an interactive dashboard for easy data visualization
-

10. Advantages

The project offers several advantages in terms of data analysis and visualization. It makes complex data easier to understand and interpret.

Advantages:

- Easy to understand visual representation of data
- Interactive dashboard for quick analysis
- Efficient use of Excel tools like pivot tables and charts

- Helps in identifying trends and patterns easily
-

11. Future Enhancements

This project can be further improved by adding more advanced features and analysis techniques. While the current dashboard provides useful insights, there is scope to enhance its functionality and depth.

Future Enhancements:

- Integration with tools like **Power BI or Tableau** for more advanced visualizations
 - Addition of **predictive analysis** to estimate match outcomes
 - Automation of data updates using external data sources
 - Inclusion of more detailed player and team comparisons
 - Improving dashboard design with better visuals and layout
-

12. Conclusion

This project successfully demonstrates how Microsoft Excel can be effectively used for data analysis and visualization. By working with the ICC Men's T20 World Cup 2026 dataset, meaningful insights were derived regarding player performance, match outcomes, and overall tournament trends.

Through the use of Excel functions, pivot tables, and charts, raw data was transformed into structured and useful information. The creation of an interactive dashboard made it easier to explore the data, compare performances, and understand key patterns such as defending vs chasing and toss impact.

The project also highlights the importance of proper data cleaning and organization in achieving accurate results. Overall, this work shows how data-driven analysis can enhance understanding of sports performance and how Excel can serve as a powerful tool for analytical and visualization purposes.

13. Learning Outcomes:

- Gained hands-on experience in using Microsoft Excel for data analysis
 - Learned to clean and organize raw data effectively
 - Developed understanding of pivot tables and charts
 - Improved ability to create interactive dashboards
 - Understood how to extract meaningful insights from data
-

14. References

The data and information used in this project were collected from the following sources:

- Kaggle (Dataset source)
- ESPNcricinfo (Match and player data)
- ICC Official Website (Tournament details)
- Wikipedia (General information and records)
- Google Search (Supporting information)
